SUMMARY

Full-stack software engineer (React, Next.js, Node.js, PostgreSQL, AWS) who ships complete products end-to-end: data model, APIs, auth, infrastructure, and UI. Currently building a production healthcare platform at Anvera Health and, independently, dunnflow, a live Stripe payment-recovery SaaS.

EXPERIENCE

Anvera Health

Software Engineer

Jan 2026 – Present

Bengaluru, Karnataka, India

- **Sole engineer at the company:** took the platform from an empty repo to production in 6 months; now in daily use by **100+ patients**
- Built the patient portal end-to-end, 8+ modules including symptom checker, triage/urgency check, lab-result and ICD-11 diagnosis explainers, care plans, medical records, appointments, and immunisation tracking
- Designed the data model and backend (50+ PostgreSQL tables, REST APIs) with two-factor login, role-based access control, and a consent-based caretaker module
- Owned all architecture and infrastructure decisions: schema design, migrations, authentication, transactional email, and AWS deployment (EC2 + RDS, Cloudflare, Redis, SES)
- Integrated India's health stack (ABHA/ABDM) and an Ayushman Bharat referral engine matching **3,000+ empanelled hospitals**, built to DPDPA-2023 privacy standards

PROJECTS

dunnflow – Payment Recovery Platform for SaaS (Founder) | Next.js, Stripe Connect, Supabase

2026 – live

- Designed and shipped the entire product solo, **live at dunnflow.com**: signature-verified Stripe webhook ingestion, automated recovery-email sequences with one-click pay links and open/click tracking, and per-account dashboards on a multi-tenant Supabase backend secured with row-level security
- Built a usage-based billing engine (**20% of recovered revenue**) with idempotent charging. Stripe idempotency keys and unique invoice constraints guarantee no double-charge, and refunds and disputes are auto-excluded from fees
- Implemented one-click Stripe Connect (OAuth) onboarding: a customer connects their Stripe account and is fully set up in about 3 minutes with no code or keys
- Shipped a live read-only demo, a free “Leak Check” analysis tool, Slack/Discord alerts, marketing/SEO pages, and production email deliverability and monitoring

Online Ring Size – Consumer Measurement Tools | Astro, i18n, SEO

2026 – live

- Built and launched **onlineringsize.com**, a free ring-size calculator that calibrates the user's screen against real objects (bank card, coin, paper) and reads sizes in 11 national standards, with an honest accuracy range on every result
- Reached **500+ users in the last month** and 3,000+ tracked events through organic Google traffic. Grew it into a full suite of bracelet, necklace, watch-strap and earring tools, a printable sizer, and multiple languages

FINA – AI-Powered Personal Finance Platform | Next.js, Supabase, Prisma, Clerk, Arcjet, AI

2025

- Full-stack finance app with AI receipt scanning (OCR) that extracts and categorises transactions, a real-time analytics dashboard on optimised Prisma/PostgreSQL queries, and scheduled background jobs for recurring transactions

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, SQL, C, C++ , HTML/CSS

Frontend Technologies: React, Next.js, Astro, Tailwind CSS, Redux, Vite

Backend & Databases: Node.js, Express, REST APIs, PostgreSQL, MongoDB, Redis, Supabase, Prisma

Tools & Platforms: Git/GitHub, AWS (EC2, RDS, SES), Stripe (Connect, webhooks, billing), Cloudflare, Vercel

Architecture & Practices: Schema Design, Auth (2FA, RBAC, OAuth2), Idempotent Webhooks, Multi-tenant RLS, CI/CD

AI-Assisted Development: Claude Code, Cursor, GitHub Copilot (Agent-driven Scaffolding, Refactoring, Debugging)

EDUCATION

Andhra University College of Engineering

B.Tech - Computer Science and Engineering - **CGPA: 7.98**

2021 – 2025

Visakhapatnam, Andhra Pradesh
